

SALVANA IMMUN^{PLUS}

Complex dietetic feed for prevention of digestive disorders

SALVANA IMMUN^{PLUS} will effectively prevent diarrhoea and reduce losses in calf raising. While feeding **SALVANA IMMUN^{PLUS}** there is no need to withdraw milk, so calves will have a continuous nutrient supply. This will result in higher growth rates and vigorous calves.

-  Regulating digestion with natural herbal components
-  Pro- and prebiotics stabilize the microflora
-  Supporting the calf's immune response
-  Toxin binding yeast cell wall for metabolic relief
-  Improving regeneration with specifically effective amino acids

SALVANA IMMUN^{PLUS} can already be fed during the colostrum feeding phase. The sooner it is used, the more effective it is preventing digestive disorders. In case of acute diarrhoea, an oral rehydration solution made with **SALVANA SICCO STOP** or **SALVALYT TAB** should be fed intermediately to compensate for excessive dehydration and losses of electrolytes.

Feeding recommendation:		per calf and day		
lifeweight of calf	milk ration per day	prevention	mild diarrhoea	acute diarrhoea
app. 50 kg	4 – 6 litres	75 g	100 g	150 g
app. 75 kg	6 – 8 litres	100 g	150 g	200 g
to be used for ... days		3 - 5	5	7

**SALVANA IMMUN^{PLUS} -
effective prevention of diarrhoea!**

Package: 2,5 kg, 8 kg bucket or 20 kg bag
