

SALVANA KÄLBERMÜSLI

Highly palatable calf starter feed

High early growth rates in calves are closely linked to reduced mortality and lower age at first calving. But those high growth rates can only be achieved with intensive feeding regimes using high quality milk replacers and palatable, pregelatinized starter feeds. **SALVANA KÄLBERMÜSLI** is the key for successful weaning. An early consumption will accelerate the development of rumen function ensuring maximum absorption, transport and utilization of nutrients.

Highly palatable flakes and pellets stimulate an early intake of dry feed

Pregelatinized starch components promote development of rumen papillae

High protein quality and nutrient density result in improved early growth and vital calves

Minerals, vitamins and selected feed additives promote health and resistance

Feeding recommendation:

SALVANA KÄLBERMÜSLI should be offered to young calves on an *ad-lib* basis. When consistently consuming 1 kg **SALVANA KÄLBERMÜSLI** per calf and day, gradually transfer to following calf starter, like farm based compound feed based on **SALVANA ELMOCIN**.

**SALVANA Kälbermüsli -
for high feed intake and early growth!**

Package: 20 kg bag
